

Mount Hunter (Unit 76)

Predominately snow and ice with some bare ground and sparse vegetation. Mount Hunter is the 3rd highest peak in Denali and among the top 20 peaks in Alaska and Canada.

Mount Hunter is considered a challenging climb and is attempted by 100-200 climbers each year. The lower west ridge and the base area on the west side of Mount Hunter are designated as a portal zone. Wilderness experience is excellent in low-use areas and when not degraded by overflights.
